PROFESSIONAL SUMMARY

Engineering-focused experimental physicist delivering Pound-Drever-Hall (PDH) locking, system commissioning, noise diagnostics, and precision measurement workflows. Contributed to the commissioning of power-recycled Michelson interferometers achieving 1.5 kW circulating optical power, $\sim 370\times$ power build-up, and order-of-magnitude vibration noise suppression. Experienced in optical system design, ultra-high vacuum operation, hardware-integrated calibration, and Python-based signal analysis. Caltech LIGO Laboratory research fellow with experience in precision instrumentation.

EDUCATION

PhD in Physics

Jan 2025 – Present

Cardiff University, UK | STFC-funded

Supervisors: Prof H. Grote · Prof K. Dooley · Dr K. Kokeyama

Post-Graduate Diploma, Physics & Astronomy

2023 – 2024

Ashoka University, India | CGPA 3.62/4.0 · Cum Laude

B.Sc (Honours) Physics

2020 – 2023

Ashoka University, India | CGPA 3.36/4.0 · Upper Second Class equivalent

RESEARCH EXPERIENCE

PhD Researcher

Jan 2025 – Present

Gravity Exploration Institute, Cardiff University

- Interferometer Commissioning:** Commissioned power-recycled Michelson interferometers for high-sensitivity measurements. Implemented laser frequency stabilization using PDH locking (dither and DC-readout loops), achieving 1.5 kW circulating optical power and $\sim 370\times$ power build-up through optimized lock acquisition.
- Vibration Isolation & Diagnostics:** Diagnosed mechanical coupling pathways using DARM transfer-function measurements. Led the implementation of passive elastomeric vibration isolation using Viton damping pads, achieving a $\sim 10\times$ RMS noise reduction above 45 Hz and enabling a $10\times$ control loop gain increase.
- Control Systems & Vacuum Operation:** Measured open-loop transfer functions and designed digital suppression notch filters to improve system stability. Operated ultra-high vacuum (UHV) systems to 10^{-7} mbar and maintained structured commissioning logs for reproducible operation.
- Optical Calibration Hardware:** Designed an independent optical calibration system via phase-modulated scattered-light injection. Engineered motor mounts and cog-wheel hardware in OpenSCAD for PLA+ 3D printing, integrating Python and Arduino Uno for drive/acquisition control in the MHz regime.

Summer Research Fellow — LIGO Laboratory, California Institute of Technology

May – July 2023

NSF/Caltech-funded Program | Mentors: Dr Y. Michimura, Prof R. Adhikari

- Designed and executed high-sensitivity polarimetry experiment to measure birefringence fluctuations in crystalline silicon, validating shot-noise-limited behavior and establishing first upper-limit measurements to evaluate compliance with next-generation gravitational-wave detector requirements.

TECHNICAL SKILLS

Hardware & Optics	Laser frequency stabilization using PDH and Fabry-Pérot cavity locking; feedback control system tuning; vibration isolation; high-precision optical alignment; noise budget analysis; notch filter design; ultra-high vacuum (UHV) operation; system integration; cleanroom protocols
Software & Analysis	Python (NumPy, SciPy, Matplotlib); spectral analysis (ASD/PSD); Git; Linux; CAD (OpenSCAD)
Instrumentation & Control	Moku:Pro (signal analyzer, PID, lock-in); control & data system; electro-optic components (EOM/AOM); PZT and piezomotor actuators; high-bandwidth photodetectors; GigE cameras

AWARDS & FUNDING

- STFC PhD Studentship** 2025–2029
Fully funded UKRI doctoral scholarship in gravitational-wave physics (Science & Technology Facilities Council)
- Visiting Researcher — LIGO Livingston Observatory, Louisiana, USA** July–Sept 2026
Funded research placement at large-scale interferometric gravitational-wave detector facility
- NSF LIGO SURF Fellowship — Caltech LIGO Laboratory, USA** 2023
NSF-funded undergraduate research fellowship

PRESENTATIONS & PUBLICATIONS

- “Optical Calibration of Gravitational-Wave Detectors using Backscattered Light” Sept 2024
UK Gravitational-Wave Conference, University of Nottingham | *Contributed Talk*
- “Measuring Birefringence and Its Fluctuations in Crystalline Silicon” July 2023
Research Presentation, Caltech LIGO Laboratory (30 scientists)
